## **Carrier Corp. Launches Flexible, High Efficiency AquaSnap® 30MP Modular Water-Cooled Chiller**

CHARLOTTE, N.C., Feb. 10, 2010 – Carrier Corp., a world leader in heating, ventilation, air conditioning and refrigeration (HVACR), has enhanced its product line with a new modular water-cooled scroll chiller designed to cover a wide range of applications. The AquaSnap® 30MP chiller with non-ozone depleting Puron® refrigerant is offered in 15-45 tons, exceeds ASHRAE 90.1 efficiency standards, and is up to 20 percent more efficient than its predecessors. Flexible modular design, compact size, and user friendly controls make the AquaSnap 30MP chillers an optimal choice for cooling plants. Carrier Corp. is a unit of United Technologies Corp. (NYSE:UTX).

“The key to the new AquaSnap chiller is application flexibility. These modular chillers cover a wide range of applications, from ice storage to heat recovery, and the modules can be combined in various configurations to meet the required capacity,” stated Tom Franaszek, chiller product business unit manager, Carrier Building Systems and Services.

Aquasnap packaged water-cooled and condenserless chillers feature a rugged, compact modular design for quick and easy installation. Optional mobility and height adjustment kits allow units to quickly roll into place and mate with existing piping. Each unit

includes its own single-point power supply and multiple high efficiency scroll compressors to provide quiet, reliable operation and true operating redundancy in modular applications.

The launch of the AquaSnap 30MP complements Carrier's offering of environmentally sound and energy efficient water- and air-cooled chillers, which can be incorporated into Leadership in Energy and Environmental Design (LEED®) Green Building Rating System™ projects.
