What is Improved Edit Order?

The Improved Edit Order tool provides enhanced ability to edit and organize items on the Properties page. When Improved Edit Order launches, all microblocks in the control program are displayed in the Improved Edit Order window, initially in a group named **Unassigned**.

The tool provides the following capabilities in the Improved Edit Order window:

- Drag and drop
- Grouping
- Advanced cut and paste
- Advanced search

CAUTIONS

- After using Improved Edit Order once, if you use Edit Order again, all changes made in Improved Edit Order will be lost.
- If the control program has been translated using Translation Assistance Tool, you should use Improved Edit Order for all future reordering of microblocks.

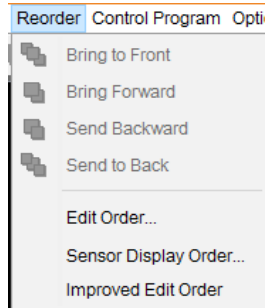

Requirements

- You are running a v7.0 system with the latest cumulative patch applied
- You have downloaded `improvededitorder.update`

Installing the patch in Snap

To install this patch

- 1 Download the .update file.
- 2 In Snap select **Help > Apply Update**.
- 3 Click **Browse**, and then select the .update file.
- 4 In Snap, click **Restart Later**.
- 5 Restart Snap.
In Task Manager, verify that the update process starts and completes.
- 6 Verify installation in Snap:
 - Select **Help > About > Update Info**; you should see the date you installed the .update file.
 - Select **Reorder**; you should see the new option in the list:

Editing a microblock's properties

From the **Improved Edit Order** window, you can edit a microblock's properties on the **Edit Properties** dialog box.

Double-click a microblock in the list to edit a microblock's properties such as **Reference Name**, the **Show Property Page Text** checkbox, or the **Property Page Text**.

NOTE If you have installed Translation Assistance Tool and translated any microblock fields into another language, you can edit the **Property Page Text** and **Display Name** in the base language. If you select a different language from the **Language** droplist, you can only view, not edit, the displayed properties.

Reordering items on the Properties page

- 1 Select **Reorder > Improved Edit Order** to see a list of all microblocks in the control program in the order in which they appear on the workspace.

 **TIP** (You can also click .

- 2 Use the buttons at the right to move, show/hide, or group microblocks. See table below.
- 3 Click **OK** to close the window or **Apply** to continue editing in the window.
- 4 Click **File > Save**.

NOTE You can also select microblocks from the window and move them using these techniques:

- Select the microblock(s) and drag them to the new location in the list.
- Select the microblock(s), right-click and click **Cut**; then click the target location in the list, and right-click and click **Paste**.

Click...	To...
 	move the selected microblock(s) up or down within the group.
 	add a group to or remove a group from the Improved Edit Order window. See <i>Working with groups</i> (page 5).
	rename a group.
	assign the selected microblock(s) on the workspace to a group in the Improved Edit Order window. See <i>Working with groups</i> (page 5).
	find a microblock(s) in the Improved Edit Order window. See <i>Locating a microblock</i> (page 6).
	highlight the microblock(s) in the Improved Edit Order window that you have selected on the workspace.
 	show or hide any unused microblocks on the Improved Edit Order window. NOTE A microblock is considered "unused" if its Show Property Page Text setting is unchecked.
	move unused microblocks from the Unassigned group to the Not-Used group.

Working with groups

Improved Edit Order allows you to select microblocks, either from the Improved Edit Order list or on the workspace, and assign them to a group, making it easier to edit the logic on a specific part of the control program or to move multiple microblocks around on the **Properties** page.

To create a group

Do one of the following:

- Click  and name the group; then click **OK**.
- Select any microblocks that you want in a new group; then drag them either between two existing groups or to the bottom of the window, where a new group is created.

To assign microblocks to a group

Do one of the following:

- Select microblocks on the workspace and click ; then select the **Group Name** from the droplist and click **OK**.
- In the **Improved Edit Order** window, select microblocks and drag them to the target group name in the list, hovering over until the group expands; then drag them to the desired location within the group.

TIP To move microblocks that have already been assigned to a group, drag them left or right outside of the group, and then drag them to the desired location.

NOTE The error checking of missing or inappropriately ordered Begin and End "Text" microblocks is currently only supported within individual groups. If matching Begin and End microblocks are located in separate groups, they will be highlighted as if they were in error. However, functionality of these microblocks, with respect to property page text layout, is not affected.

Locating microblocks

To locate microblocks in the Improved Edit Order window, you can find them either from the workspace or from within Improved Edit Order.

From the workspace

- 1 Select microblocks on the workspace.
- 2 Click  to highlight the microblocks in the Improved Edit Order window and expand their groups.

From within the Improved Edit Order window

- 1 Click .
- 2 Select an item from the **Search Option** droplist for your search, for example, Reference Name.
- 3 In the **Search What** field, type the search string.
- 4 Click **Find**.

TIPS

- The search begins at the top of the window. If a microblock is already selected, the search begins at that point. When Search reaches the bottom of the list, you may click **Go to beginning** to continue the search.
- To narrow the search to within a group instead of the entire control program: Expand the group, select one of the microblocks, and check the **Search within group** field.

Document revision history
