What is the ProxyConfig add-on?

The i-Vu® v6.5 or later application or some of its add-ons require information from the Internet and your company has a proxy set up, you must configure the proxy settings for i-Vu® that allow access to the Internet. The ProxyConfig add-on lets you define these settings.

The screenshot shows a dialog box titled "Proxy Settings" with the following options:

- Automatically determine proxy settings
- Use a proxy
- Proxy requires authentication

Below the settings, there is a "Test URL:" label followed by a text input field containing "http://www.google.com" and a "Testing ..." button. At the bottom of the dialog is a "Save Configuration and Test" button.

Installing and setting up the ProxyConfig add-on

If your company's internet access has a proxy set up, you must configure the proxy settings to allow some add-ons to access someone else's data. You define these settings in the ProxyConfig add-on.

Installing the ProxyConfig add-on

- 1 Do one of the following:

i-Vu® Plus interface	Go to the Main Menu ▼ drop-down list, select System Options > Add-ons tab.
i-Vu® Pro Interface	Go to the Main Menu ▼ drop-down list, select System Options > System Settings > Add-ons tab.

- 2 In **File to install**, browse to the proxyconfig.addon file on your desktop and click **Open**, then **Install** (or **Install Add-on**). After a few seconds, ProxyConfig add-on will appear in the **Installed** table and will be shown as running.
- 3 If the ProxyConfig add-on does not display the status **Running**, select the ProxyConfig add-on in the **Installed** table and click **Enable**.
- 4 In the **Details** section under the **Installed** table, click **Main page** to set up the proxy server information.

- 5 In the i-Vu® interface, click **Close** in the **Add-ons** dialog.

Using the ProxyConfig add-on

- 1 If you did not connect to the add-on through the **Main Page** link in the Weather add-on interface on the **Add-on** tab, you can use the following method to access the setup page:

Go to `http://<system IP address>/proxyconfig`.

NOTE `/proxyconfig` is case sensitive.

- 2 When you installed ProxyConfig, it automatically tried to determine the proxy settings.
- 3 If it found the settings, the **Host** and **Port** information is filled in for you. If it could not find the proxy settings or, if you are using the i-Vu® Plus application, you need to enter them as follows:
 - a) Uncheck **Automatically determine proxy settings**.
 - b) Check **Use a proxy**.
 - c) Enter the **Host** and **Port** information. You can obtain these from your network administrator.
- 4 Check **Proxy requires authentication** if the proxy requires it, and then enter the **Username** and **Password**. You can obtain these from the network administrator.
- 5 Click **Save Configuration and Test**.

NOTE The **Test URL: http://** field has an external website address. If the proxy settings are correct, you will see the green text shown below.

- 6 Close the **Setup** page.
