PrimeLINE® with EDGE Technology

Get an Efficiency EDGE

Introducing the EDGE Technology option for the PrimeLINE unit.

EDGE stands for Enhanced Digital for Greater Efficiency. At its core, EDGE technology is an optional set of design refinements that improve the PrimeLINE unit’s record of efficiency by reducing energy consumption for perishable cargoes by up to 20 percent.*

*Savings for TCO energy points

For shipping lines, reducing energy demand remains key to keeping operating expenses in check. With that in mind, we’ve engineered an optional package of system enhancements that give the successful PrimeLINE® unit an even sharper EDGE in performance and efficiency.

In addition to the energy savings gained through PrimeLINE with EDGE Technology, additional energy savings can be achieved by using FuelWise optimization software available on many Carrier platforms.
